HEALTHCARE MODEL IN 2020

- 1000 citizens
  During one month
- 800 of them have some medical concerns

Symptom checker
Data extraction
Data analytics
Decision making
Advice and recommendation

- Nurse
- General practitioner
- Specialist
- Laboratory

160

640

Self-care

PHR

Health account

During one month, 800 out of 1000 citizens report some medical concerns. An AI system processes data from symptom checkers, data extraction, data analytics, decision making, and advice and recommendation. This system interacts with various healthcare professionals including nurses, general practitioners, specialists, and laboratories. The collected data is stored in an EHR and a health account. PHR (Personal Health Record) and self-care options are also integrated into the model.
VISION OF HEALTH 3.0

- Medical services
- Disease episode information
- EHR Sickness data
- PHR Health and wellness
- Health data
- Devices
- Services
- Genomic data

- AI Services for the person
- My Data
- MY HEALTH Health Account
- IHAN

- IHAN-International health account number
HEALTHCARE MODEL 2030

- Empowering citizens
- Decision Support / AI
- Personal health account
- Home based
- Mobile
- Point of care devices
